1.0 Scope.

1.1 Identification.

This Software Version Description (SVD) applies to the Installation Level Integrated DataBase (ILIDB) running on a networked AIX operating system on UNIX platforms.

1.2 System Overview.

ILIDB is part of the ISM Project that is an Army-wide Major Automated Information System (MAIS) initiative. The primary ISM objective is to enhance, through automation, installation management functions. ISM applications consist of standard procedures packaged into functional applications that automate as well as integrate day-to-day installation processes.

ISM applications use the Installation Level Integrated DataBase (ILIDB), which is the central repository for data that is common to more than one ISM application, and various local databases that contain data elements unique to the individual ISM applications.

1.3 Document Overview.

This document provides the instructions necessary for implementing the formal ILIDB Interim Change Package (ICP) V41-A08-07-10-A. It informs users of changes made to the system and provides Points of Contact (POCs) in the event of questions or problems.
